

1. Yes, proof:

$$f(n) \leq cg(n) ; \forall n \geq n_0$$

$$3n + 9 \leq c(n^3) ; \forall n \geq n_0$$

let $n_0 = 1$, $c = 12$; then

$$3n + 9 \leq 12(n^3); \forall n \geq 1$$

2. No, by definition, we have:

$$f(n) \geq cg(n) ; \forall n \geq n_0$$

$$3n + 9 \geq c(n^3) ; \forall n \geq n_0$$

Since (n^3) increases at a faster rate than $(3n)$ as n goes to positive infinity, there is no positive value (c) that will make the above inequality valid.
